**Put an End
to those
Cold Drafts
and Reduce
your Heating
Costs**

Binjasystem is designed to provide perfect insulation of windows and doors, sealing out drafts, noise, and dust. Exposed to weather, windows and even doors may get warped over time. We must all have seen a door twisted due to its position between the elements and the warm air inside. Well, doors may get twisted, but why worry? The problem is that the jamb will not warp along with the door, which leads to gaps emerging between the door and the jamb.

Since it is difficult to readjust the frames of windows and doors to compensate for door or window warping, there's a strong case for a self-adjusting weather-stripping product. Binjasystem lends itself to filling even greater gaps, for which the conventional weather-strip just would not be enough. Binjasystem keeps out draft, dust and noise, and prevents warm air from escaping, thus also reducing your heating bill.

Simple is Beautiful and Vice Versa

INNOSUOMI

Binja-Puu Ky is a wood manufacturing company located in the municipality of Ii, Finland. Although it is neither a big enterprise nor does it focus on developing highly complicated products, the company

is competent enough to develop a superior product for sealing out drafts, noise and dust. This patented insulation solution designed by Binja is called Binjasystem. Binjasystem was awarded the first prize in the INNOFINLAND competition 1997, promoting Finnish innovate activities (<http://innosuomi.iaf.fi/en/main.html>).

The best ideas are simple! This is something we at Binja-Puu agree with. The ingenuity of Binjasystem lies in its plain functionality. Looking more closely at the concept, you will also learn to appreciate its value.

Easy to Install

Binjasystem comprises a weather-stripping set combining moldings, available in different colors and finishes, with integrated flexible weather seals. The strip is mounted on the jamb, outside frame or threshold, providing a permanent self-adjusting weather seal for all windows and doors. Thus Binjasystem completely fills the gap, sealing out those chilly drafts. See illustrations for details.

Binjasystem Won't let Loose

Once fastened, Binjasystem won't let you down. Simply nail on or snap on using concealed fixing system. The plastic mounting brackets used for concealed fixing are easy to fasten with conventional tools; then snap on the weather-strip, which will clamp onto bracket grooves.

Trim Fit

Moldings are available in different lengths, in white or in four wood finishes. Thresholds are available in oak or in MDF with oak finish. A skirt guard is also included. Thresholds are available in lengths 35, 50, 60, 90 and 120 mm.

If you know how to use the hammer, just nail the molding in place. If you desire a more polished installation, use concealed mounting brackets. In either case, the outcome will be trim and fitting, thanks to the different finish options. Binjasystem will seal out those nasty drafts for good!
